

the examiner as being drawn to a non-elected invention. Claims 1-10 and 12 stand rejected.

In the attached Compliant Amended Claims, in accordance with the present amendment format:

-claim 1 is parenthetically indicated as being 'currently amended', and is reproduced in its entirety with markings to show current changes;

-claims 2-9 and 12 are parenthetically indicated as being 'original', and are reproduced in their entirety;

-claim 10 is parenthetically indicated as being 'canceled' and has been corrected such that no claim text is presented; and

-claims 11 and 13-17 is now correctly parenthetically indicated as being 'withdrawn', but the text of each of the claims is reproduced in its entirety.

Entry of the Amendment submitted on July 27, 2004 together with the Compliant Amended Claims submitted herewith is respectfully requested.

Reconsideration based on the Compliant Amended Claims and the remarks in the Amendment is also respectfully requested.

In view of the Compliant Amended Claims and the remarks in the Amendment it is respectfully submitted that the present invention is patentable over the cited prior art. Early and favorable consideration is respectfully requested. Applicants reserve the right to file division, continuation and continuation-in-part applications to prosecute any inventions or species.

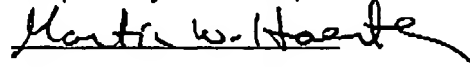

It is believed that there are no fees or charges due at this time. If there are fees or charges due at this time, the Commissioner is authorized to charge Deposit Account No. 05-1320.

If there are any other issues remaining which the Examiner believes could be resolved through telephone conference, the Examiner is respectfully encouraged to call the undersigned at the telephone number indicated below.

Ser. No. 09/863,845 - Response to Notice of Non-Compliant Amendment
Examiner: Tri M. Mai - A/u 3727

6. (original) The thick-walled container of claim 5 wherein the resin body is square.
7. (original) The thick-walled container of claim 1 wherein the resin body substantially encapsulates the bottle except for the protruding distal end of the neck.
8. (original) The thick-walled container of claim 1 wherein the resin body is transparent and at least a portion of an outer surface of the bottle beneath the resin body is provided with a treatment in the form of one of grinding, etching, cutting, a coating, a label and a transfer.
9. (original) The thick-walled container of claim 8 wherein the treatment further comprises indicia.
10. (canceled)
11. (withdrawn) The thick-walled container of claim 1 wherein the resin body further comprises at least one clearance exposing part of an outer surface of the bottle.
12. (original) The thick-walled container of claim 3 wherein at least the passage and the storage chamber are anodized.
13. (withdrawn) The thick-walled container of claim 1 further comprising a second bottle with a neck extending from a storage portion to a distal end having an opening, wherein the resin body is over-molded about the second bottle such that at least the distal end of the neck of the second bottle protrudes from the resin body.
14. (withdrawn) A method of making a thick-walled container comprising the steps of:
- providing at least one thin-walled bottle, the bottle having a neck extending from a storage portion to a distal end having an opening, the storage portion defining a storage chamber in fluid communication with a passage through the neck to the opening, the storage chamber having a peripheral wall and a bottom wall at least one of which has a minimum wall thickness;

positioning the bottle in a mold cavity defined by opposing dies, the bottle positioned in the mold cavity such that at least the distal end of the neck protrudes from the mold cavity through an aperture defined between the opposing dies, the aperture adapted and dimensioned to seal the opposing dies against a corresponding surface of the bottle;

injecting resin into the mold cavity at a pressure sufficiently low to avoid breaking or collapsing the bottle; and

curing the resin sufficiently to remove the thick-walled container from the mold cavity.

15. (withdrawn) The method of claim 14 wherein the bottle is made from one of glass or metal.

16. (withdrawn) The method of claim 15 wherein the metal is aluminum.

17. (withdrawn) The method of claim 14 further comprising an elastomer gasket in the aperture to seal the opposing dies against the corresponding surface of the bottle.
